Trend Innovations Holding Acquires Highly Sophisticated AI Engineâ€”Game-Changing Asset Launches Company into $138-Billion AI Software Industry

NEW YORK, NY, April 05, 2023 (GLOBE NEWSWIRE) -- Trend Innovations Holding Inc. (**OTCQB**: **TREN**), a company specializing in acquiring, creating, and developing innovative software technologies that utilize artificial intelligence (AI), has officially become a player in the fast-growing AI industry, and more specifically, the $138.4-billion AI software industry with its acquisition of the highly sophisticated machine learning AI system, Avant! AIâ„¢ (Avant).Â Avant is a powerful and extremely unique AI engine that can expedite the financial growth of Trend Innovations with real revenue producing opportunities while expanding the companyâ€™s portfolio of assets across the entirety of the AI landscape.Â A game-changing asset that can deliver this kind of growth potential sets Trend Innovations up as an attractive up-list candidate or a potential buyout opportunity.

The future of the global economy lies in artificial intelligence, and according to Entrepreneur magazine, AI is expected to be one of the fastest-growing industries of 2023â€”already valued at $328.34 billion. Â Trend Innovationsâ€™ acquisition is ideally timed given the rockstar status that artificial intelligence is enjoying worldwide combined with the explosive growth rate of the market(s) in which Trend Innovations will now be competing. Â According to Precedence Research, the size of the global AI software market was $138.4 billion in 2022, and it is expected to surpass $1.1 trillion by 2032.Â The research firm added that the market is poised to grow at a compound annual growth rate (CAGR) of 22.97% from 2023 to 2032.

Itâ€™s an acquisition that truly defines Trend Innovations as a ground-floor investment opportunity.Â For investors, Avant offers the chance to grow with a company as it launches in a new and immensely popular directionâ€”one in which competing companies will enjoy market share in an industry that is well on its way to being valued in the trillions of dollars.

Because Avant is at the leading edge of machine learning platforms, acquiring this technology presents Trend Innovations with myriad opportunities to drive revenue well into the future.Â Simply put, with this technology, the companyâ€™s path forward is limitless, and it provides Trend Innovations plenty of options to develop AI solutions, including in-house, with potential clients, and with third-party developers.

Trend Innovations can develop and enhance its own assets and any assets that it may acquire.Â The Company could also position Avant as a business-to-business (B2B) solutionâ€”offering the technology to companies in a range of industries, including entertainment, cybersecurity, healthcare, information technology, hospitality, finance, retail, transportation and more.Â And the platform has also been developed as a software development kit (SDK) that Trend Innovations could extend to third-party developers to integrate the Avant system into their own products and services.

Itâ€™s such a powerful asset that the company could potentially have a hand in the development of applications that introduce AI across every single industry by incorporating the technologyâ€™s capabilities into new and proven technologies.Â Avant can be used as a platform technology for developing applications that require learning volumes of information and streamlining processes in just about any industry.Â Because the system efficiently handles vast amounts of data in real time, it is ideally suited for Artificial General Intelligence (AGI) applications, autonomous machines, medical agents, cybersecurity, etc.Â Essentially, what Trend Innovations has acquired is a new generation of AI that can truly revolutionize a host of industries allowing the company to play a significant role in the burgeoning era of AI.

So, what is it that sets Avant apart from its competitors?Â Avant is a text generation, deep learning and self-training model that includes â€œsupervisedâ€• and â€œunsupervisedâ€• learning sub-systems.Â Avant works based on an innovative and unique concept, whereby unlike similar AI technologies, it can learn on its own. Â The technology is constantly enhancing its information database with the advantage of â€œunsupervisedâ€• learning capabilities.Â And while Avant can function as a â€œchatbotâ€• like Open AIâ€™s well known ChatGPT, for instance, chatting and producing content is just the tip of the iceberg when it comes to the functionality of Trend Innovationsâ€™ new AI system.

The Avant system is designed to provide businesses and consumers with a natural language interface to interact with their devices and systems.Â Avant utilizes machine learning, which uses algorithms to analyze large amounts of data, learn from the insights, and then make informed decisions.Â Avant uses natural language processing (NLP) to interpret and communicate with user requests.Â Itâ€™s a system that can understand unstructured data, which is how most data exists today, and it curates that data from a wide range of sources, including professional articles, research papers, blogs, and even human input.

Avant is trained to respond to questions about highly complex situations, and then quickly provide a range of responses and recommendations all backed by evidence.Â The technology uses statistical modeling and scores a viable solution, and then it estimates assurance. Â Avant gains robust knowledge and improves its expertise by learning from its own experiences and failures just as humans do.Â Avant basically gets wiser and more knowledgeable over time.

While Trend Innovations initially acquired the Avant system to empower another technology it acquired, the many industries that Avant could touch and play a role in advancing are exponential. Â Weâ€™ll cite just a couple of examples.Â One future possibility for this artificial intelligence is the healthcare industry.Â The company could offer Avant as a â€œmedical expert agentâ€• for medical web sites/apps or other similar sites/apps in the field, as well as offering what could function as a personal medical assistant for everyone, including doctors, nurses and even individuals.Â Imagine an intelligent medical advisor at your fingertips and available to you around the clock that provides you with accurate medical advice. Â This type of â€œsuper-intelligent agentâ€• would be invaluable in any household worldwide.

Another industry where the Avant technology could play a role is in the production of microchips.Â The technology could be used with the goal of achieving increased reliability for microchips by developing â€œdesign and analysisâ€• software that could analyze microchips during the design process to ensure the ultimate reliability, optimal power consumption and fast performance creating clean-by-construction chips.Â When it comes to microchips that are used in aviation, space exploration, medical equipment, military, etc., high reliability is necessary in order to prevent failures.

According to the developers of Avant, â€œthe technologyâ€™s ability to achieve â€˜human objectivesâ€™ is what will make it superior to anything that any other competitor can offer today.â€•Â And that is what AI is all aboutâ€”creating intelligent machines that can perform tasks that would normally require human intelligence, such as recognizing patterns, making predictions, and solving problems. Â The goal of AI is to create systems that can learn from experience and improve their performance over time just like humans do.Â Trend Innovations now has a technology that could prove to be an industry-leading product that changes the way we get information, while also becoming a first-in-class tool in the development of other technologies.

About Trend Innovations Holding Inc.

Trend Innovations Holding is an expert in the field of information technology based on artificial intelligence. Recently, Trend Innovations acquired Avant! AIâ„¢ and InstantFAMEâ„¢, two technologies operating in multi-billion-dollar industries. The companyâ€™s â€œThy Newsâ€• application is one of the company's key projects. Thy News is a worldwide application used for processing news from multiple sources. Thy News was created for users who value their time but want to keep up with the latest in world news. The app offers the user the opportunity to create their own news feeds solely from those sources that are of interest to them, as well as creating additional news feeds segmented by topic.

About Stock Market Media Group

Stock Market Media Group is a News and Media content development IR firm offering a platform for corporate stories to unfold in the media with press releases, feature news articles, research reports, corporate videos, and radio-style CEO interviews.

This article was written based on publicly available information. Stock Market Media Group may, from time to time, include our own opinions about the companies, their business, markets and opportunities in our articles. Any opinions we may offer about any of the companies we write about are solely our own and are made in reliance upon our rights under the First Amendment to the U.S. Constitution and are provided solely for the general opinionated discussion of our readers. Our opinions should not be considered to be complete, precise, accurate, or current investment advice, or construed or interpreted as research. Any investment decisions you may make concerning any of the securities we write about are solely your responsibility based on your own due diligence. Our publications are provided only as an informational aid, and as a starting point for doing additional independent research. We encourage you to invest carefully and read the investor information available at the web site of the U.S. Securities and Exchange Commission at www.sec.gov. We also recommend, as a rule, that before investing in any securities, you consult with a professional financial planner or advisor, and you should conduct a complete and independent investigation before investing in any security after prudent consideration of all pertinent risks.Â We are not a registered broker, dealer, analyst, or advisor. We hold no investment licenses and may not sell, offer to sell, or offer to buy any security. Our publications about Trend Innovations are not a recommendation to buy or sell a security.

Should Stock Market Media Group and its management own shares in the profiled company, they may benefit from any increase in the share price of the profiled companies and hold the right to sell the shares bought at any given time including shortly after the release of the companyâ€™s profile. Section 17(b) of the 1933 Securities and Exchange Act requires publishers who distribute information about publicly traded securities for compensation, to disclose who paid them, the amount, and the type of payment.Â Under the Securities Act of 1933, Section 17(b), Stock Market Media Group discloses that it was remunerated twelve-thousand dollars paid for by a third party via bank wire, to produce content related to Trend Innovations.

Stock Market Media Group and its management do not own any shares in Trend Innovations and never accepts compensation in free-trading shares for its marketing services of the company being profiled, however third parties that have compensated Stock Market Media Group may hold free-trading shares of the company being profiled and could very well be selling, holding or buying shares of the companyâ€™s stock at the same time the content is being disseminated to potential investors; this should be viewed as a definite conflict of interest and as such, the reader should take this into consideration.

If Stock Market Media Group ever accepts compensation in the form of free trading shares of the company being profiled and decides to sell these shares into the public market at any time before, during, or after the release of the companyâ€™s profile, our disclaimer will be updated accordingly to reflect the current position of any free trading shares received as compensation for our services.
